

Team Name : Prompt Pirates

Team Leader Name : Shambhavi Pandey

Problem Statement :

Develop an AI solution that simplify complex legal document into clear, accessible guidance , empowering the users to make informed decisions.

Our prototype is an AI-powered solution designed to make complex legal documents easy to understand. Legal language is often dense and confusing, making it hard for everyday users to make informed decisions. Our goal is to bridge that gap.

What it does:

- Takes legal documents directly from the user (PDF, text, etc.)
- Extracts the relevant text from the document
- Summarizes the content using simplified, clear language
- Provides the user with accessible guidance, helping them understand their rights, responsibilities, or next steps

This solution empowers individuals—especially those without legal backgrounds—to confidently interpret legal content and take action based on informed understanding.

How different from existing solutions?

- Most AI assistants (like ChatGPT) are **general-purpose**, not specialized for legal text.
- Current legal research tools are **subscription-based & expensive**.
- Our solution leverages **InLegalBERT + LLM reasoning** for **legal accuracy** and **accessible insights**.

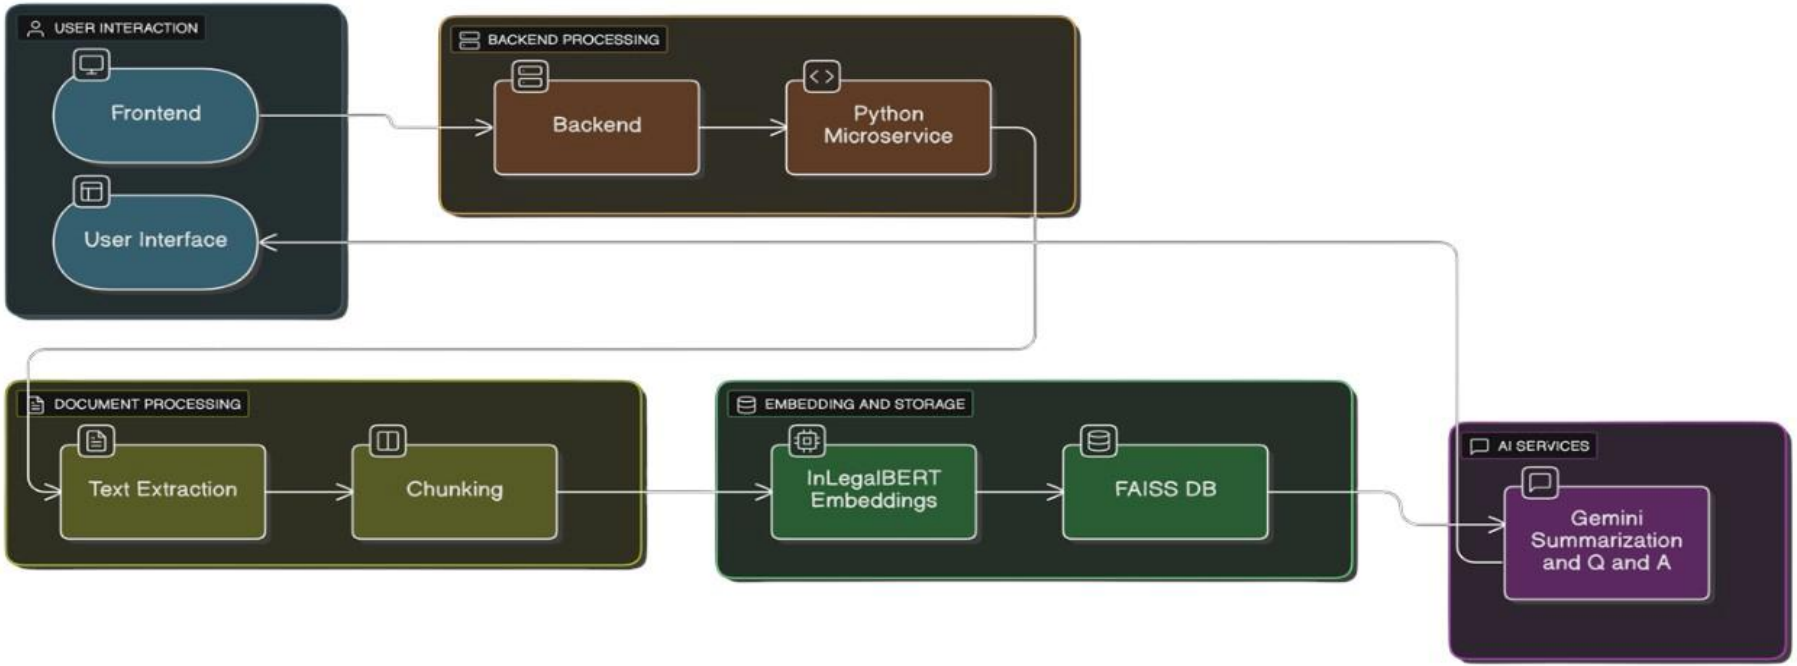

How will it solve the problem?

- **Upload → Extract → Search → Summarize → Q&A**
- Saves hours of manual reading by providing **direct answers**.
- Empowers **lawyers, students, and businesses** to quickly understand contracts & clauses.

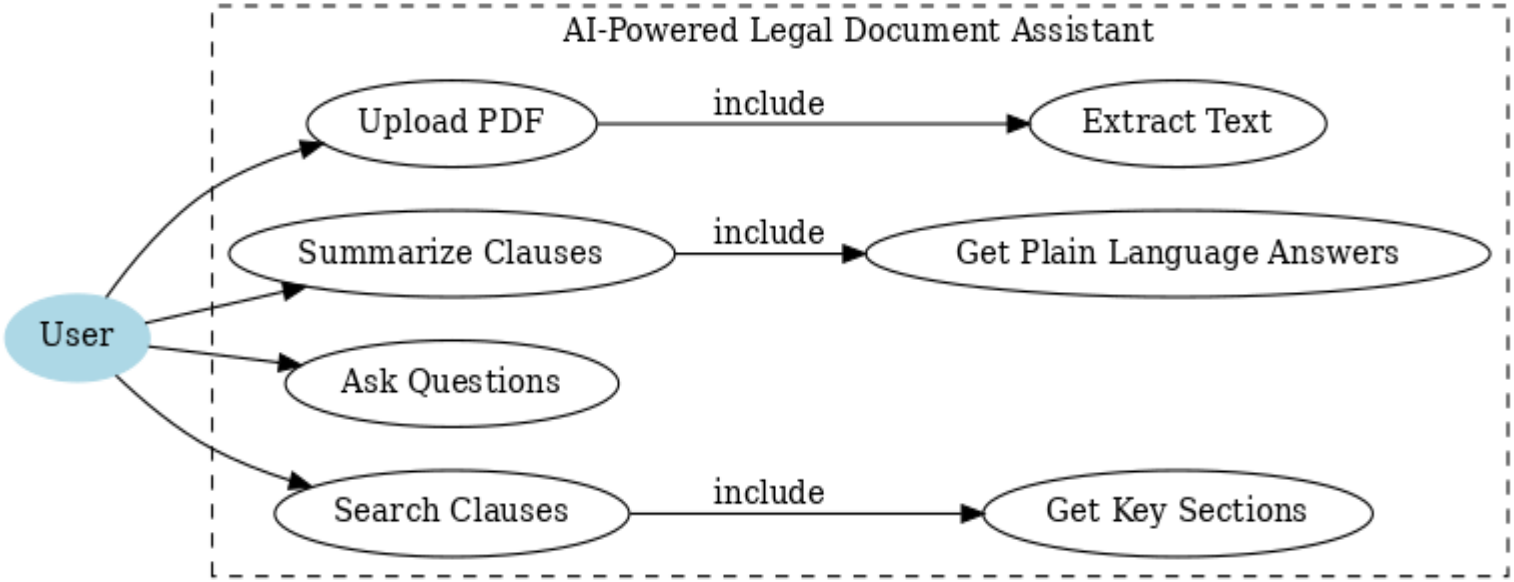

USP (Unique Selling Proposition)

⚖️ Legal-domain optimized embeddings (not generic AI)
🔍 Semantic clause-level search with FAISS
🤖 Hybrid approach (Hugging Face + Gemini) → balance of **precision + natural language answers**
💻 Offline + Cloud-ready deployment

Technologies to be used in the solution:

Feature / Module	Technology / Tool
PDF Upload & Extraction	Python , Node.js
AI-Powered Summarization	Hugging Face Transformers , Gemini
Interactive Q&A	Chatbot frameworks, NLP libraries
Clause-Level Search	LegalBERT, MongoDB full-text search
Security & Privacy	AES/RSA Encryption, JWT, HTTPS
Web Frontend	React.js , Typescript
Backend & API	Node.js, Express.js, REST API

Challenge

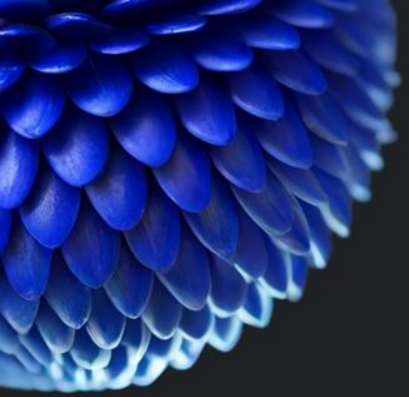

- ❑ Legal documents (rental agreements, loans, ToS) are filled with jargon and hidden terms.
- ❑ Creates **information asymmetry** → people unknowingly accept unfavorable terms.
- ❑ Leads to **financial & legal risks** for individuals and small businesses.

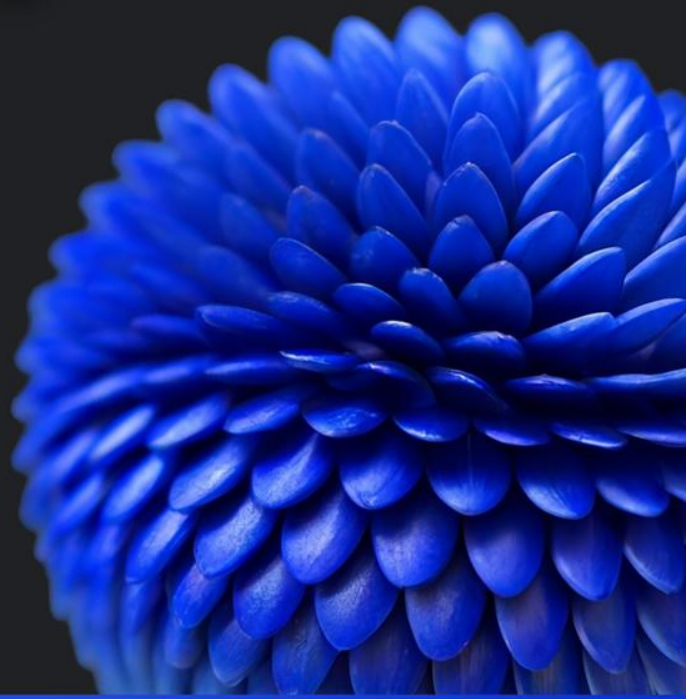

Hackathon Relevance

- ❑ Uses **Google Cloud Generative AI (Gemini + embeddings)**.
- ❑ Empowers **citizens, SMEs, and organizations** to make informed decisions.
- ❑ Acts as a **first point of contact** before engaging costly legal experts.
